Animals Ocean Habitats

Main Subject: Science

Strand: Biology

Classes: Horse Chestnut, Elm and Cedar

What I should already know:

- There are habitats in our local area such as ponds, woodlands and urban habitats.
- A microhabitat is habitat which is small.
- Food chains show how living things get their food.

Sticky Knowledge:

The ocean is a habitat for many living things such as fish, mammals and plants.

Animals such as whales and dolphins need blubber to keep them warm.

Fish have gills to help them breathe underwater.

Algae grows in the ocean and this is eaten by fish.

Orcas and sharks are the main predators who live in the ocean habitat.

Algae

Key Vocabulary:

Algae: a plant that grows in the ocean.

Blubber: a thick layer of fat.

Gills: the part of the body that helps fish to breathe underwater.

Ocean: a large body of water.

What I will be able to answer (Learning Questions):

- What is an ocean habitat?
- What lives in an ocean habitat?
- How do animals adapt to the ocean habitat?
- What is the main predator in the ocean?
- What can harm the ocean habitat?
